

Newsletter
Issue 115 - 17.06.2002
<http://net-security.org>

This is a newsletter delivered to you by Help Net Security. It covers weekly roundups of security events that were in the news the past week. Visit Help Net Security for the latest security news - <http://net-security.org>.

=====
LANguard Security Event Log Monitor
=====

LANguard SELM is a network wide event log monitor that retrieves logs from all NT/2000 servers and workstations and immediately alerts the administrator of possible intrusions. Through network wide reporting, you can identify machines being targeted as well as local users trying to hack internal company information. LANguard analyses the system event logs, therefore is not impaired by switches, IP traffic encryption or high-speed data transfer.

Download your evaluation copy from:

[General security news]

FIRST PEOPLE INJECTED WITH ID CHIPS, SALES DRIVE KICKS OFF
The 'barcoding' of people has quietly begun rolling out in the US, via Applied Digital Solutions' VeriChip.
>> <http://www.net-security.org/news.php?id=344>

OLD CODE IN WINDOWS IS SECURITY THREAT
Microsoft will retire old code from Windows more quickly, to plug security holes that are years old.
>> <http://www.net-security.org/news.php?id=345>

MONITORING LINUX FIREWALLS WITH FIRELOGD
Monitoring firewalls on Linux can be a challenge because of the

text-based nature of the OS. The firelogd program can greatly improve the monitoring process.

>> <http://www.net-security.org/news.php?id=346>

THE COMMONER'S VIRUS

Despite its virulence, the Klez worm is ignored by the newspapers and dismissed by the digerati. Could the demographics of its victims be a factor?

>> <http://www.net-security.org/news.php?id=347>

CIBOULETTE ENCRYPTION SOFTWARE FOR OS X RELEASED

Marcadesign has released an OS X version of Ciboulette 1.5. Ciboulette is an encryption utility designed for clipboards and files.

>> <http://www.net-security.org/news.php?id=350>

FIRST CONFIRMED SPEAKERS FOR HIVERCON 2002

HiverCon web site was updated with the first three confirmed speakers - Simple Nomad, Ofir Arkin and Rain Forrest Puppy.

>> <http://www.net-security.org/news.php?id=351>

XBOX HACKERS PREVIEW MOVIE PLAYER

Further Xbox hacks have shown what the machine is really capable of, as hackers reveal a prototype DivX player for the games console.

>> <http://www.net-security.org/news.php?id=352>

CRACKS IN THE SYSTEM

Russia's cybercrime squad fears the next al-Qaeda attack may be on crucial computer networks.

>> <http://www.net-security.org/news.php?id=353>

SECURE NETWORK SPENDING SEEN OVER \$46 BLN BY 2006

Spending on "virtual private networks" will grow more than 100% over the next 4 years as companies increasingly jump online and the ranks of telecommuting employees grow.

>> <http://www.net-security.org/news.php?id=354>

WHITE HOUSE STRESSING UNORTHODOX IN IT SECURITY FIGHT

The Bush administration is playing "dirty" with the private sector in a roundabout attempt to fortify the nation's computer security defenses, according to Richard Clarke.

>> <http://www.net-security.org/news.php?id=355>

REVIEW: HARDENED LINUX PUTS HACKERS ENGARDE

If you're ready to construct your fortifications of stronger stuff, security-enhanced Linux distributions may be the answer. They offer an alternative to the patch-and-pray cycle we're stuck in today.

>> <http://www.net-security.org/news.php?id=356>

STUDY: SOFTWARE PIRACY INCREASES

Software piracy grew last year, breaking six years of progress by software companies to stamp out illegal use, the Business Software Alliance reports.

>> <http://www.net-security.org/news.php?id=357>

FIND THE ROGUE PROTOCOLS

Akonix Systems Inc is offering companies a way to monitor and regulate employees' use of insecure internet services such as instant messaging, with the launch of its first product, L7.

>> <http://www.net-security.org/news.php?id=358>

SUPER-SECURE LINUX

The NSA is moving close to pushing out secure additions to a module that works with Linux, and no, that's not a contradiction of ideas.

>> <http://www.net-security.org/news.php?id=359>

SUN MICROSYSTEMS RECEIVES A SECURITY CERTIFICATE

Sun Microsystems' "Trusted" Solaris 8 4/01 Operating Environment is the first and only operating system to receive the highest level of security certification.

>> <http://www.net-security.org/news.php?id=360>

CISCO MAKES DESKTOP SWITCHES MORE SECURE

Network administrators will be able to put up more safeguards against attackers from inside an enterprise with a series of enhancements to Cisco desktop switches.

>> <http://www.net-security.org/news.php?id=361>

CORPORATE SECURITY OVERVIEW: 04-11 JUNE 2002

Security companies send us their press releases, which we republish in our press section. This is an overview of interesting developments in the corporate security world during the past week.

>> <http://www.net-security.org/article.php?id=130>

CONSUMERS FACE WIRETAPPING FEES

FBI demand for new surveillance functions forces telcos to upgrade equipment, forego new customer services.

>> <http://www.net-security.org/news.php?id=363>

VIRUS GIRL FINDS HACKER BOYFRIEND

It's a match made in heaven, or on IRC anyway. Gigabyte, the teenage, female virus writer in Belgium, has fallen in love with Nostalq1c, a notorious Belgian hacker.

>> <http://www.net-security.org/news.php?id=364>

NEW OPENBSD ANTI-TROJAN KERNEL PATCHES

The latest version of Anti-Trojan software, V2 is available as a beta for OpenBSD 3.1 Release only at this stage with others to follow.

>> <http://www.net-security.org/news.php?id=365>

HIGH TECH FOR HOMELAND SECURITY: WE MUST DO MORE

What role will technology play in national security? If Bush's proposal for the new Department of Homeland Security is passed, not a large one. But there are two rival plans that take tech more seriously.

>> <http://www.net-security.org/news.php?id=366>

SECURITY HOLES: THE DANGER WITHIN

Significant destruction can be caused by employees, yet they continue to be overlooked as an IT security threat.

>> <http://www.net-security.org/news.php?id=367>

HOW HACKERS DO IT

This article describes the tricks, tools, and techniques hackers use to gain unauthorized access to Solaris Operating Environment (Solaris OE) systems.

>> <http://www.net-security.org/news.php?id=368>

FTC VOWS TO KEEP CLOSER TABS ON PRIVACY BREACHES

Companies that release customer data as a result of security mistakes could find themselves in the cross hairs of the Federal Trade Commission.

>> <http://www.net-security.org/news.php?id=369>

THE SOLUTION TO SPAM - REVERSE FILTERING

Dynamic modification of rules is simple for people but complex for machines; indeed, it is so complex that the cost of sending spam would skyrocket, eliminating the problem.

>> <http://www.net-security.org/news.php?id=370>

FEDS, INDUSTRY, BATTLE THE BIGGEST BUG

A security hole in implementations of Abstract Syntax Notation One may threaten some of America's most crucial networks. Relax, the President's been briefed.

>> <http://www.net-security.org/news.php?id=371>

DEVELOPING AN EFFECTIVE INCIDENT COST ANALYSIS MECHANISM

In this article Dave Dittrich discusses the Incident Cost Analysis Modeling Project, an attempt to develop a workable model for estimating the costs of computer security incidents.

>> <http://www.net-security.org/news.php?id=373>

INTRODUCTION TO NESSUS

This article describes the basics of installing and using Nessus. Nessus operates as a client and server system.

>> <http://www.net-security.org/news.php?id=374>

COMMENT: A TAXING TIME FOR SECURITY

Inland Revenue had to shut down its online tax declaration site as its supposedly secure records were left wide open.

>> <http://www.net-security.org/news.php?id=375>

WALL STREET AIMS TO THWART CRIMINALS WITH DATABASE

Financial services firms plan to create a company that will run a central database of information on customers and potential clients to weed out those with ties to crime.

>> <http://www.net-security.org/news.php?id=376>

NEW FRETHEME WORM ON THE CRAWL

Antivirus companies are warning users to install patches and signature files to protect against a worm variant that has surfaced in the United States and Europe.

>> <http://www.net-security.org/news.php?id=377>

FEDS EXAMINE ICANN OFFICIALS

Congress is taking a look at the California company that administers Internet addresses after critics said it is too slow to address security holes and should be more closely regulated.

>> <http://www.net-security.org/news.php?id=378>

WATCHING NATO SPY PICTURES

Nato surveillance flights in the Balkans are beaming their pictures over an insecure satellite link - and anyone can tune in and watch their operations live.

>> <http://www.net-security.org/news.php?id=379>

JPEG WORM BREAKS NEW GROUND

Antivirus companies warned of a new virus that communicates through digital images, but security experts aren't sure how much of a threat this latest evolutionary branch of malicious code poses.

>> <http://www.net-security.org/news.php?id=380>

SECURITY BREACHES MAY BE THE NEXT TOBACCO-EXPERTS

That's what computer experts are telling businesses that have been hit by a steady stream of infections from viruses and other vulnerabilities that hit their machines.

>> <http://www.net-security.org/news.php?id=381>

WHAT TO DO WITH THAT VIRUS ALERT?

Don't pass it on, says an expert, as it may be a hoax and the creator may be exploiting your goodwill.

>> <http://www.net-security.org/news.php?id=383>

TOORCON 2002 CALL FOR PAPERS

Papers and presentations are now being accepted for ToorCon 2002, which is being held on the 27th-29th of September 2002 at the San Diego Concourse in San Diego, CA.

>> <http://www.net-security.org/news.php?id=384>

'MASSIVE ABUSE' OF PRIVACY FEARED

Plans to increase the number of organisations that can look at records of what you do online could lead to widespread abuse of personal information.

>> <http://www.net-security.org/news.php?id=385>

CLEVER PEOPLE CAN FOOL MOST SOPHISTICATED BIOMETRICS

The Fraunhofer Research Institute in Germany, set out to see whether it could fool various biometric systems. It was easy.

Articles can be contributed to staff@net-security.org

USABILITY AND PRIVACY: A STUDY OF KAZAA P2P FILE-SHARING

P2P file sharing systems are rapidly becoming one of the most popular applications on the internet, with millions of users online exchanging files daily. While primarily intended for sharing multimedia files, programs such as Gnutella, Freenet, and Kazaa frequently allow other types of files to be shared. Although this has no doubt contributed to P2P filesharing's growing popularity, it raises serious security concerns about the types of files that users are aware of sharing with others. Users who accidentally or unknowingly allow their private or personal files to be shared risk disclosing their private information to other users on the network.

VIRUS PROTECTION: ALL ROADS LEAD TO A MULTI-MODAL, MODULAR APPROACH

The purpose of this paper is to explain why we have concluded that the future of virus protection lies with architecture, rather than product, and why a multi-modal, modular approach makes most sense. We show that as virus protection is a component of business security, it is best approached at the infrastructure and end-user levels using multiple modalities simultaneously.

>> <http://www.net-security.org/article.php?id=131>

UNDERSTANDING THE EMAIL-BORNE THREAT

In the past few years, email has become the predominant purveyor of viruses. This rapid communications technology outpaces the signature-based scanner updates, allowing widespread infection to occur in a matter of mere hours. Attempts to address this problem have ranged from an assortment of active content and behavioral analysis tools, improved signature-based scanners, gateway content filtering applications, digital immune systems, and security patches.

[Security Software]

Windows software is located at:

http://net-security.org/software_main.php?cat=1

Linux software is located at:

http://net-security.org/software_main.php?cat=2

FIRELOGD 1.3

This is a program that will parse ipchains or netfilter (iptables) log data in real time. It will queue up a small batch of alerts and mail them to you. It can also be used to parse an existing log file and it will take log data on standard input for formatting.

>> <http://www.net-security.org/software.php?id=145>

SECURECFM 1.0

SecureCFM is dedicated to the audit of ColdFusion source code, in order to detect then correct possible Cross Site Scripting vulnerabilities. You can use it to check that your web site is not vulnerable.

>> <http://www.net-security.org/software.php?id=146>

IPCOP 0.1.1

IPCop Firewall is a Linux firewall distribution geared towards home and SOHO (Small Office/Home Office) users. The IPCop interface is very user-friendly and task-based. IPCop offers the critical functionality of an expensive network appliance using stock, or even obsolete, hardware and OpenSource Software.

>> <http://www.net-security.org/software.php?id=147>

PROBOT 2.2.0

ProBot is a powerful and versatile workstation monitoring solution. This software generates the detailed event log that is kept securely in binary files. These files may be later referred by the system administrator or computer owner for the exact reconstruction of the computer usage.

>> <http://www.net-security.org/software.php?id=148>

LEVIATHAN AUDITOR 1.0

Leviathan is a network auditing and penetration tool which runs on and against Microsoft machines. It dumps Users, Groups, Services, Shares, Transport devices and MAC addresses over port 139 or 445.
>> <http://www.net-security.org/software.php?id=149>

AVIRCAP 2.0

AVirCAP is a system for manual and / or automated detection of CodeRed and Nimda type of hack attempts and virtually all other kinds of "logable" intrusion attempts.
>> <http://www.net-security.org/software.php?id=150>

MICROCODE 0.96

microCODE from Databay enables you to encrypt your PHP scripts before publication. Thereby you can protect your code against unwanted insights or even modification of the sources by a unauthorized third party. This is especially required for commercial applications, where protection of intellectual property is a primary aim.
>> <http://www.net-security.org/software.php?id=151>

WIPE 2.0.1

Wipe is a secure file wiping utility.
>> <http://www.net-security.org/software.php?id=152>

TUXFRW 2.15

TuxFrw is a set of scripts created to ease the way Linux IPTables rules are configured. Using TuxFrw an user can configure his own Linux / Netfilter based network firewall, simply passing some IP address numbers and other services utilization policies.
>> <http://www.net-security.org/software.php?id=153>

NGREP 1.40

ngrep strives to provide most of GNU grep's common features, applying them to the network layer. ngrep is a pcap-aware tool that will allow you to specify extended regular expressions to match against data payloads of packets. It currently recognizes TCP, UDP and ICMP across Ethernet, PPP, SLIP, FDDI, Token Ring and null interfaces, and understands bpf filter logic in the same fashion as more common packet sniffing tools, such as tcpdump and snoop.
>> <http://www.net-security.org/software.php?id=154>

ERASER 5.4

Eraser is a secure data removal tool for Windows. It completely removes sensitive data from your hard drive by overwriting it several times with carefully selected patterns.
